Prerequisites

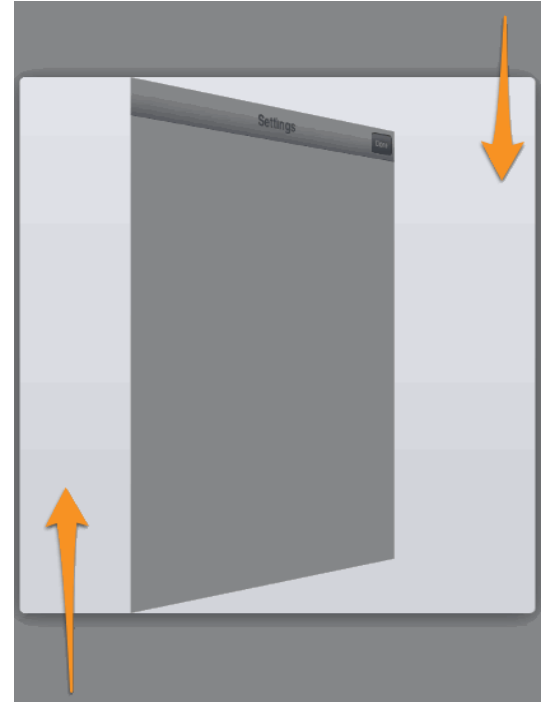

- **Android Layout Fundamentals**
 - For 2nd, 3rd and 4th module
- **Basic knowledge of Fragments and View Pager**
 - For 5th module
- **IDE - Android Studio**

Android Animation

Why do we need animation?

Animations are especially useful when the screen changes state, such as when content loads or new actions become available.

Animations can also add a polished look to your app, which gives your app a higher quality feel.

Adding too much animations can slow down the app and can be detrimental.
